You'll want one of our swell brown suits if you see them. One look will satisfy you as to our claims. They're splendid suits and excellent values. The fabrics are of this season's newest creations. Plenty of soft and negligee shirts in stock--better than ever before.

COX-GREER-M'DONALD CO.

GOVERNORS MEET IN CONFERENCE

PRESIDENT ROOSEVELT DELIVERS NOTABLE ADDRESS TO STATE EXECUTIVES.

NATION'S VITAL PROBLEM

Present Position of Republic Among Countries of World Due to its Natural Advantages, He Says.

Washington, May 13.—President Roosevelt delivered a notable address at the conference of Governors of the United States on the question of conserving the resources of the nation. President Roosevelt's speech was practically an outline of his ideas on the subject and he made suggestions as to the method of handling the question, which he characterized as one of vital importance to the Nation's future existence. His address follows:

Governors of the Several States and Gentlemen: I welcome you to this conference at the White house. You have come hither at my request so that we may join together to consider the question of the conservation and use of the great fundamental sources of wealth of this nation. So vital is this question that for the first time in our history the chief executive officers of the states separately and of the states together forming the nation, have met to consider it.

With the governors come men from each state chosen for their special acquaintance with the terms of the problem that is before us. Among them are experts in natural resources and representatives of national organizations concerned in the development and use of these resources; the senators and representatives in congress; the supreme court, the cabinet and the inland waterways commission have likewise been invited to the conference, which is therefore national in a peculiar sense.

Points in President's Speech.

The conservation of natural resources is the weightiest problem now before the nation.

Every step of the progress of mankind is marked by the discovery and use of natural resources previously unused.

Of late the rapidity of the process of industrial progress has increased at such a rate that more space has been actually covered during the century and a quarter occupied by our national life than during the preceding six thousand years that take us back to the earliest monuments of Egypt, to the earliest cities of the Babylonian plain.

The republic's growth has been due to the rapid development, and alas, that it should be said to the rapid destruction of our natural resources.

The prosperity of our people depends directly on the energy and intelligence with which our natural resources are used.

Ada's New Law Firm.

Judge Charles T. Barney, formerly of Burlington, Vermont, and Messrs. W. D. Huffer and A. M. Croxton, both of whom are so well and favorably known that they require no introduction to our readers, have formed a partnership for the practice of law, under the firm name of Barney, Huffer & Croxton, and will have offices in the Duncan Block, in this city.

In this connection, we clip from the Burlington Daily Free Press, the following resolutions, which were unanimously adopted by the Bar Association of Chittenden County, Vermont, at a banquet, given by that Association in honor of Judge Barney, shortly before his removal to Oklahoma:

"Resolved, The members of Chittenden County Bar Association learn with deep regret that Brother Charles T. Barney is soon to remove from this city.

In severing his professional relations with this association and

with the bar of this county and state we assure him of our personal esteem and of our appreciation of the worth of his fellowship.

We here record our recognition of his excellent legal attainments and his unblemished personal character, and we bear witness to his life of honor and integrity.

He has been an active and useful member of this association, modest in manner, faithful in service.

In his new field of labor we bespeak for him a cordial reception. The bar before which he shall practice will be enriched by his ripe scholarship in the law, and the state of his adoption will gain a high minded citizen.

The best wishes of his brethren go with him, and, as we bid him adieu, we assure him that we shall hold his friendship, and his professional and personal worth, in honored remembrance."

THE ICE FACTORY.

Plant Nearly Ready Will Begin Delivering Ice About Next Wednesday.

Mr. B. H. Frick, general manager of the ice plant returned yesterday from Kansas City, Mo., where he has been to hurry in supplies so as to get the plant started at the very earliest moment. We are advised that the company will begin the delivery of ice on next Wednesday morning if all supplies arrive as expected. We are sorry to note that they will not be able to get their wagons until about the 28th of this month on account of so many orders being ahead of theirs in the Beggs wagon works in Kansas City where they are being built.

However, they will hire wagons and make deliveries and expect by the time their own wagons and teams arrive they will have everything well in hand. The plant expects to take care of Ada first and will always try and keep a surplus of ice on hand in case of emergency, but should any thing happen they have arranged to get all the ice needed. The people of Ada are to be congratulated on securing such men as Mr. Frick as a citizen and the ice company on securing him as manager.

High Water.

E. C. Tally returned last night from an extended trip to Texas. Mr. Tally says between Ada and Atoka the rain was so heavy that the entire track of the Katy was under water in places and it was necessary to run an engine ahead of the passenger train. This accounts for the train being about five hours late.

HOLLEY

Is papering and painting his drug store out of his own material. Come in and see how it shines.

I can fix you up the same way. No music boxes to catch your trade.

CRESCENT DRUG STORE

The 2-buckle oxfords in tan or gun metal and patent are most fashionable for this spring's wear. They are here in the latest toes

\$3.50 and \$4.

HATS

A most attractive variety for men and young men; soft and stiff at \$2.50 and \$3.00.

Straw hats and Panamas. The straight rim are most appropriate. We have them in all sizes. For boys 50c; for men from \$1.50 to \$3.00.

Panamas in several styles to choose from, \$6 to \$7.50. They are actually worth more than we ask for them.

Mothers, do you want to save money on your boy's clothing? We surely can do it.

I. HARRIS

The exclusive clothing and gents' furnishing house in Ada. Bat and ball given with every boy suit.

Ada Evening News

By B. WEAVER, Editor and Owner
Entered as second-class mail matter March 26
1894, at the postoffice at Ada, Oklahoma, under
the act of Congress March 3, 1879.

Railroad Assessments and Railroad Passes.

Editor Frank Frantz, while campaigning for governor last fall, on the republican ticket, was treated very nicely by the railroad companies of the state. When Secretary Garfield just happened to drop down here and wanted to make a tour of the eastern half of the state, the presidents of the Santa Fe, Rock Island, the Frisco and the Katy, each, in turn, placed their private car at the disposal of the secretary of the interior and the republican candidate. The latter also held and used annual passes over the various lines of railroad.

Last year the republican board of equalization, with Gov. Frank Frantz as its chairman, assessed the main line of the Santa Fe railroad at \$5,400 per mile.

The railroads of Oklahoma did not take very kindly to C. N. Haskell, the democratic candidate for governor last fall. No private cars for him. The best he was allowed to do was to pay his fare and take his chances with the other passengers. Even when so small a favor as the stopping of a through train at a way station was asked of the division superintendent of one of the railroads, in order that the democratic candidate might be able to keep an appointment without taking a twenty-five mile drive, it was curtly refused.

The state board of equalization of the state of Oklahoma, composed of democratic officials, of which Gov. C. N. Haskell is chairman, assessed the main line of the Santa Fe railroad at \$45,000 per mile.

RESTRICTIAL BILL PASSES

PUTS SEVEN MILLION ACRES OF
LAND ON MARKET.

TO CONFERENCE COMMITTEE

Oklahoma Delegation Will Endeavor
to Make Bill Include Allot-
ment of Half Bloods.

Washington, May 13.—The bill removing restrictions from lands of the Five Civilized Tribes of Oklahoma, as amended by the senate committee on Indian affairs and reported by Senator Owen, was passed by the senate today, as recommended by the committee. The measure, having been amended after passing the house, will now go to a conference committee and the Oklahoma delegation will attempt before that committee to have the bill raise the limit so as to include halfbloods and will recommend other minor amendments.

The original bill provided that restrictions should be removed from all lands, including homesteads, of allottees as of less than half blood but the senate committee amended it so as to extend to Indians of quarter or less than quarter blood and thus reduced the total from ten million to seven million acres. This amendment leaves Congressman Carter, a restricted Indian.

All homesteads of mixed blood Indians having one-quarter or more than one-quarter Indian blood, including minors, and all allotted lands of enrolled living full-bloods shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1913, except that the secretary of the interior may remove such restrictions under such rules and regulations as he may prescribe.

DISTRICT COURT.

The Dr. Breco Murder Trial Given
to the Jury.

About 11 o'clock this morning the Dr. Breco case was given to the jury. This is one of the most interesting trials ever tried in the Ada court house. Over 40 witnesses were subpoenaed and 20 testified. County Attorney Wimbish and Judge H. M. Furman ably represented the state, while Attorneys Crawford & Bolen and W. I. Cruce and J. B. Champion of Ardmore represented the defendant. At the time of going to press the jury was still out.

It is freely predicted on the streets that it will be a hung jury.

Locate Lake of Oil.

Tulsa, Okla., May 10.—Five miles south and west of Glenn Pool, on the Korndorfer lease, the Prairie Oil and Gas company today drilled in at a depth of 2,340 feet, a well of high grade oil, offsetting another big well at the same depth, producing the same grade of oil. This strike is remarkable in that both these wells are at least 500 feet deeper than wells in the Glenn Pool and reveal entirely new sand with every indication that this entire country is underlaid with a lake of high grade oil at a depth until now never discovered. It is possible that many if not all wells in the Creek oil fields will in time be drilled to the new sand.

Prisoner Captured.

Robert Graves who escaped from the officers a few nights ago at the county jail was recaptured by the city marshal of Coalgate, yesterday and returned to jail today. Deputy John Kitchens and Constable Dillard assisted in the capture. Graves tells an amusing story of how the officers in looking for him walked all around him. He was under a bridge near the Frisco depot and Walter Goens stopped immediately over him making inquiry about him and he heard the whole conversation. He remained under the bridge until after dark.

Notice—Tonight

There will be a mass meeting of Ada boosters at the Club rooms for the purpose of talking gas, oil, artesian water and state normals. If you are for Ada, come out and say so.

Cyclones Coming.

The weather prophets are predicting heavy and destructive winds in the southwest. Tornadoes are doing havoc already. It will pay you to insure your property.

Deafness Cannot Be Cured.
by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by Catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free.

F. J. CHENEY & CO., Toledo, O.
Sold by all druggists.
Take Hall's Family Pills for con-

Tired nerves, with that "no ambition" feeling that is commonly felt in spring or early summer, can be easily and quickly altered by taking what is known to druggists everywhere as Dr. Shoop's Restorative. One will absolutely note a changed feeling within 48 hours after beginning to take the Restorative. The bowels get sluggish in the winter-time, the circulation often slows up, the kidneys are inactive, and even the heart in many cases grows decidedly weaker. Dr. Shoop's Restorative is recognized everywhere as a genuine tonic to these vital organs. It builds up and strengthens the worn-out weakened nerves; it sharpens the falling appetite, and universally aids digestion. It always quickly brings renewed strength, life, vigor and ambition. Try it and be convinced. Sold by G. M. Ramsey.

Read the Daily News.

Weak women should read my "Book No. 4 for Women." It was written expressly for women who are not well. The Book No. 4 tells of Dr. Shoop's "Night Cure" and just how those soothing, healing, anti-septic suppositories can be successfully applied. The book and strictly confidential medical advice is entirely free. Write Dr. Shoop, Racine, Wis. The Night Cure is sold by G. M. Ramsey.

Screen Door Paint

'Tis coming time of year now to put up your screen doors, and in order to make them look as good as new and to prevent the wire from rusting, you should give them a coat of our ready-for-use screen door paint. We have it in green and black colors. We also sell Japalac, Varnolac, Lacquerett, house paints, carriage paints, Neals bath tub enamel, white enamel, gold and silver, Collier's white lead and linseed oil, glass, putty etc.

G. M. Ramsey

THE PURE DRUG DRUGGIST.
"We Deliver the Goods."

Ada bores for oil tonight at the 25,000 Club rooms. Come out. Ada will shoot a gas well at the Club rooms tonight. Be on hand.

Gas Meeting.
You are invited to attend the gas meeting at the Club rooms this evening. If there is anything under this town it has got to come out. Ada never quits. Come to the mass meeting tonight and help take another start for the state normal fight and discuss the gas and oil prospects.

Special Notice.
I desire to call the attention of the public to Section 14 of ordinance No. 81, which reads as follows:

"No plumber shall extend any water pipes, or introduce any pipe, hydrant, bath or water closet, urinal, or hose connection or furnish, fit or connect any device or fixture whatever for the use of water without the written order of the recorder; no plumber or other person except the superintendent of the water works shall turn on or off the water at the street stop cocks under any circumstances.

Also the following Section No. 25 of same ordinance as follows:
"It shall be unlawful for any person except the superintendent of

COMPLETE LINE Of Watches, Rings, and the famous Edison Phonograph

Masons Drug Store. Ada, Okla.

the water works to interfere with any street stop cock, or to turn the water off or on therefrom or to knowingly permit it to be done without giving immediate notice thereof to the recorder."

Another section of this ordinance states no other parties are allowed to use water from the same hydrant, unless permission is granted.

I have special instructions from the council and mayor to enforce all sections of this ordinance, that I find being violated. I hereby warn all parties that same will be done, and parties will be arrested if the ordinance is not complied with.

Respectfully,
W. H. MARKHAM,
32tf Water Commissioner.

Piles are easily and quickly checked with Dr. Shoop's Magic Ointment. To prove it I will mail a small box as a convincing test. Simply address Dr. Shoop, Racine, Wis. I surely would not send it free unless I was certain that Dr. Shoop's Magic Ointment would stand the test. Remember is made expressly and alone for swollen, painful, bleeding or itching piles, either external or internal. Large jar 50c. Sold by G. M. Ramsey.

Old papers at the News office.

There is a Pink Pain Tablet made by Dr. Shoop that will positively stop any pain, anywhere, in 20 minutes. Druggists everywhere sell them as Dr. Shoop's Headache Tablets, but they stop other pains as well as headache. Dr. Shoop's Pink Pain Tablets simply coax blood pressure away from pain centers—that is all. Pain comes from blood pressure—congestion. Stop that pressure with Dr. Shoop's Headache Tablets and pain is instantly gone. 20 tablets 25c. Sold by G. M. Ramsey.

We are now prepared to manufacture on short notice anything you may want that is practical to be constructed of concrete. 30tf ADA CONSTRUCTION CO.

The Vanishing Feet

BY ROY NORTON.

rest, and her appeals were seconded by those of the officers who feared for the physical strength of this man on whom so much depended, and who would have guarded him as a precious jewel of untold worth. He protested at first, and then, like one waking from a dream and suddenly conscious of a great weariness, made no objection when the rear admiral, who now looked like a workman, put his hat upon his head and tendered him his coat. He permitted them to throw it over his shoulders, and finally, with a look of infinite satisfaction at the growing structure before him, took his daughter's arm and tramped away. He was an old man again, yielding the tribute of age to the toll of youth. They boarded the boat and sought their cabins; but even as they retired there came to them through the open portholes, like a lullaby, the sounds of unremitting labor intermingled with the lap of waves on the coral beach. The first creative step toward a national victory and supremacy had been taken in a day, even while the war cloud across western seas was gathering strength for its overcast; and, waiting, wondering, and expectant, the world was unaware.

CHAPTER XV.

The Great Discovery.

From the shore came a dull, moaning sound, now rising, now falling, but incessant, as if some gigantic animal, stricken and suffering, was shrieking the anguish of its death throes to the solitudes of the keys and the waste of waters round them. The frightened birds took flight to the north to escape the weird monotone, and the timid animals of the forest cowered in fear; but the men of the island looked at one another exultantly, with mutual congratulations on the rapidity of their work. The blast furnace which was to cast the plates was being blown in.

Days and nights of unremitting toil had followed that first landing; machine shops had been completely installed, power plants perfected, and buildings for the men erected; additional supplies had been received; and another gunboat, the Columbia, augmented the patrol which passed ceaselessly round the keys, guarding their secret and warning inquisitive fishermen to avoid the waters; corps of expert smelting men from the mines of the west had joined the colony—and all for this, the casting of the first plate, which was to take place this day.

In the assay rooms there had been the constant testing of crude metals, and apportioning them and discarding those which were inferior. Trained hands were those that worked over the bucking boards and manipulated the delicate scales which would register the tiniest mark of a lead pencil with as great accuracy as they would a pound weight. Everywhere about the plant were men who wrought with precision and interest, bound together in the great enterprise until differences in station were forgotten and all were as a family praying for success.

"Old Bill" Roberts, assisted by his daughter, had permitted no foot but theirs to enter the room where his apparatus was installed, and no hand but theirs to touch its complicated mechanism. With the love of a creator he had spent the last hours fondling its cold, unresponsive parts and adjusting it, and then stood and watched, as a mother watches her firstborn, the initial movements of the great masterpiece which was a mystery to all the world but him and Norma.

Engineers and officers from all parts of the plant, warned that the crucial test was at hand, gathered round the door of the innermost room, until invited in by the inventor, and then slowly entered and found standing places at a safe distance from the intricate mass, whose polished knobs, twisted bars and gleaming tubes seemed to them a tangled riddle. Norma, garbed in the stained khaki wrapper which she wore in the laboratory at home, hovered here and there round the apparatus, lightly trying an adjustment or closely inspecting a joint, her face grave, calm, and self-possessed. Her father, his thin old face drawn into a scowl of concentration, busied himself likewise, and made the final connections. So careful was he that he even inspected the duplicate apparatus which stood as a reserve at the other end of a casting mold, but which it was not his intention to use except in case of emergency. Satisfied that all was in readiness, he beckoned to two assistants, who trundled in the first composite plate and deposited it in its bed. He made the connection with the electrodes in a few minutes' deft work, and then straightened up and looked about the room, where all was still and expectant.

The wondering engineers saw him wave his daughter back a short distance as though fearing for her safety, watched him take a final look over his appliance, and then throw a switch. Brilliant streaks of purple, of unknown reds and glaring whites, raced each other in quick succession through the tubes, little indicators here and there sparked out malevolently, and the machine seemed to leap, strain and throb with a life of its own, uncanny and mysterious because of its silence. The group of men peered curiously at the plate, saw it glow a dull red, pass the cherry stage to a dull pigeon blue, and then suddenly burst into a gleaming mass of iridescent white.

"Fusion!" one of the engineers

whispered to a man beside him. "He has fused that plate in less time than it could be done by any means I ever heard of. That is the way he metamorphoses his metal."

The rays died out, the apparatus stopped its quivering, and the inventor with hands clasped behind him stood intently watching the now cooling metal. Within the laboratory all was silence. From the adjoining buildings came the regular sound of hammers, and from somewhere off toward the cabins a man's voice was raised in a song of soldiery. The sheet of metal lost its color and became dark. "Old Bill" Roberts pressed a button above his head, and cooling sprays began dissipating themselves over the surface, sending up brief splutterings and clouds of rapidly diminishing steam.

"It's cool enough now to handle," he said in an oddly constrained tone of voice, turning to the engineers, "and if some of you will help me carry it to the testing tank you may see me prove the first plate on which hangs the fate of our country."

In an awed hush of expectancy they all volunteered; but only three men were needed to hold it while it was attached to the great arms which were to revolve it in the water and demonstrate its resistance. The inventor threw a switch, and the sheet began to move. Before him was a dial, and beneath it a scale of friction pulls showing the resistance offered by normal metal. He fastened his eyes on the indicator with a look of strained watchfulness. Slowly the needle point swung round as the arms gained the maximum of speed, and then it came to a standstill, while a look of doubt and perplexity crept over the scientist's face.

"Norm," he called, huskily— "Norm! Was everything all right? Is everything working true?"

She took a step behind him, and with a look no less worried than his own stared at the dials indicating the speed of revolution and the scale of resistance. "Yes, father," she replied, gently, "everything is all right." She put her arm over his shoulder as if to shield him. "But something must have gone wrong somewhere else. Come away now and let us think it over."

She turned to the waiting officers behind and looked them calmly in their faces, while the inventor, dazed and uncomprehending, ran his fingers through his shock of white hair and gazed at the telltale dials as if hypnotized by two staring eyes.

"Gentlemen," she said, "the first experiment is a failure!"

Those among them who had been slightly skeptical smiled at one another, while those whose belief had been more firm looked sympathetically at this slip of a girl, who faced them all in steady defiance, her trust in her father, herself and their invention unshaken and unflinching.

"You, Mr. Jenkins," she said, addressing one of the engineers, "are yourself a scientist and an experimentalist. You of all present know how easy it is for a tiny mistake to rob delicate work of definite result." There was a note of appeal in her voice that reached them all.

As if with one accord they rushed forward, grasping her hand and surrounding her father, giving them words of encouragement.

It was the gruff voice of the old admiral which aroused them to renewed action. "Pshaw, Bill! That's nothing," he growled. "Here! We've got more plates cast. Throw another on, and give it a try-out. Wake up, man! Wake up! We've got to make it go!"

Jenkins and two others rushed to the adjoining room and brought in a second slab of metal, and the old inventor, giving himself a shake as if pulling back from the very vortex of despair, with trembling hands placed the sheet of insulation and made the new connections with the plate.

"Norm," he almost whispered, "you look it over and turn the current on this time. Somehow my eyes seem to have gone back on me."

Again they watched from a distance the steady movements of the assistant, who without a tremor threw on the current, held it in leash, and directed it as if within her hand she held the clutch of a friend. Once more they saw the metal cool, the sprays turned on, and then came a dull, grinding, riving sound, and a column of dust shot up into the air and belled out over the room. They saw her fall back unconscious as if from some sudden shock, and instinctively sprang to her aid.

In mortal fear that some disaster had overtaken her, some unknown injury from that apparatus whose voltage was as deadly as that which sweeps through a murderer's chair, they picked her up and carried her out into one of the draughting rooms and laid her limp form on a table.

Her father in a burst of terrible anxiety tore open her corsage and ran his hand over her heart. "She's not dead!" he whispered, hoarsely. "She's been knocked out by a wild current or something I don't understand."

A long breath of relief encircled the room. Not until she recovered consciousness and sat weakly up was the suspense mitigated.

"Feel better, little girl?" the old admiral asked, and the others pressed forward with solicitous inquiries.

She looked at them for a moment, regained her mental control, and answered: "Yes, I'm all right now; but don't mind me. What of the plate?"

They smiled at one another as it dawned upon them that the plate had been forgotten. It was manifestly unfair that she of all others should not

have had been accomplished; so as a guard of honor they supported her back to where the cruel agent stood, and then one and all started back with exclamations of amazement.

The plate on which they were building their hopes had disappeared! Where the insulated tank which held it had reared its squat length was now a ragged hole in the floor, bordered by the silvered ends of twisted and shattered wood, and beneath this was a yawning hole several feet deep, broken electric wires, and the great slab of metal.

Norma, as if the excitement of the discovery had acted as a tonic, released herself from the supporting arms, walked to the shining brass structure, and leaned against it. Brockton pulled off his cap and scratched his head in a puzzled way, and Jenkins removed the glasses from his nose and began nervously polishing them. The other engineers gaped at each other, at the inventor and then back to the hole wherein to all appearances was buried the thing on which they had built all their hope. "Old Bill" Roberts stood by its edges, looking down and examining the broken wires, a picture of perplexity or despair. He came back and crowded through their midst, examining a connection and tracing out one of the strands, and then stood in listless attitude, his brows drawn into a frown, and his arms hanging loose and pendulous from his shoulders. The time stretched into minutes, and Jenkins and Norma began a discussion, to which the others listened, striving to understand the phraseology of electrical science, of which many of them had little more than the layman's knowledge. Suddenly a sharp cry came from the inventor.

They looked to the other side of the room, whither he had retreated, and beheld him jumping up and down like

"Gentlemen," She Said, "the First Experiment Is a Failure."

a madman. His fists were clenched and thrust into the air, where they opened clawlike and waved a tremolo of excitement. "I've got it!" he screamed. "I've solved it!"

They drew back from him, fearing that failure had loosened his brain; but he rushed through the group, excitedly calling for men to repair the break. The admiral, unused to his periods of enthusiasm, stared at him blankly, his lower jaw unconsciously drooping until his mouth yawned in cavernous suspense. In his mind nothing but insanity could account for this outburst.

Norma, on the other hand, laid a restraining hand on his arm and said: "Father, what's the matter? What is it?"

"We've been working in the dark!" he answered vehemently, and then with the jubilation of a boy but in a calmer tone continued: "By an accident we have discovered powers in our combination of electricity and metallurgy that we have not dreamed of, and which, if we can control them, make the resistant armor we came down here to manufacture as useless as a wooden hull!"

The admiral suddenly dropped his bulk to a stool. "Good God!" he gasped, "are you mad?"

Norma, like one from whose eyes a hoodwink had been suddenly removed, and appearing almost to have read her father's mind, put her hand out to his shoulder and looked at him searchingly. A slow grin of great exultation swept over the lean old face into which she peered, drove the wrinkles into the corners of the eyes, and a mass of radiating furrows round the mouth.

"You've guessed it," he said, and then turned to the admiral. "Brockton, you don't know what that hole meant; but in an hour from now I'm going to show you. That is, Norma, my assistant, and I will."

Then in a sudden frenzy for work he asked them all to leave until he sent for them, and they, wondering and speculating on his next endeavor, obeyed. Only the workmen, who had descended into the cavity and were preparing to hoist the plate and mold, and the admiral, by special invitation, remained. The clang of hammers resounded hollowly through the room as the timbers beneath the floor were shored up by the carpenters; then came the setting of another and larger tank than the one which had been so unexpectedly driven into the earth. The smaller plates which had been intended only for experimental purposes were exhausted, and therefore they had nothing on which to operate save two immense castings weighing many tons. Wide sliding doors rolled back, and workmen from the foundry, with straining muscles and clinging toes,

slowly pushed in low-wheeled cars on which rested the huge pieces of metal. A steel crane projected its ungainly arm, reached slowly down, and in a Titanic grasp picked up one piece, moved it into position over the new bed, and deposited it in a great basin whose material indicated that it would be able to withstand any heat.

The admiral in boyish exuberance would have thrown wide the door; but the inventor, remembering the other contretemps, forbade. The latter busied himself for a few minutes in his storehouse, and returned with a sheet of peculiar insulation which was of his own invention, almost indestructible by heat, and a resistant to any form of radioactivity, which he placed with great care on top of the huge plate. The second plate was lowered squarely on top of this, clamped for additional security, and the workmen dismissed. The connections were made in identically the same way as in the previous test, except that one electrical apparatus was attached to the upper plate above the insulation and the other to the one beneath. Brockton, seeing that the currents were about to be applied, backed off into the corner, until stopped by the farthest partition.

"It's all right this time," the inventor assured him. "Wild current and wet floor before, badly insulated handle, too. All fixed up now. Won't be any accident this time," and so on, making the final inspection of his apparatus as he talked. Norma reviewed her father's work, to be certain that all was well, and then at a nod from him took her station at the other monster which had not been used hitherto. There was a simultaneous movement on their part, and as if suddenly endowed with a soul, the lights once more flashed here and there, glaring at them with sinister contempt—Frankensteins under control!

The admiral, fascinated by the mystery of science, stared at the white-haired old man who was calmly watching his play of colors, and then at the girl who with equal self-possession and coolness manipulated the strange currents beneath her hands. They were animated as by one mind, throwing their levers and switches to and fro at identically the same moment without looking at each other, and the click of the closing currents came in unison. Not until then did they step back from their stations and interchange what seemed to the admiral mutual glances of congratulation.

"That assistant of mine is a wonder!" was all the old man said as he came over, dragged a stool up beside that on which the officer sat, and gleefully rubbed his hands together. "She thinks more clearly than I do."

Brockton, who had been tense as a violin string and had almost forgotten to breathe, drew a long breath and looked at the girl, who had been leaning against the wall as though exhausted, but was now watching the slowly cooling metal. He would have asked questions; but the inventor turned to him and with an air of triumph said:

"I wish you would invite all those who were here when we made the first test. Then you will have the explanation unless I am again mistaken."

The admiral obeyed, and even as the cooling sprays were sifting over the great pieces of metal they came trooping in from the work which they had resumed. There were men from the draughting rooms with pencils behind their ears, engineers from the outside with shirt sleeves rolled up and forgotten diagrams under their arms, and one man came from the laboratory absentmindedly carrying a test tube, balancing it so that he might spill none of the liquid which it contained. Norma was now resting calmly against one of the huge dead machines.

In a tone of unusual gravity Roberts addressed them. "Boys," he began—they were all boys to him—"you have witnessed the accidental discovery, I believe, of the most powerful force the world has ever known. You

have been fortunate. In more than 70 years of life I, who have spent the time in strange studies and stranger work, have had no privilege so great. You have all been kind to my daughter and to me, and I am glad you are here now." He paused for a moment, seeing with introspective eyes all the great events of his life. Then, recalling himself from this review, he turned to Jenkins as a kindred spirit, and to a boyish officer who stood near at hand.

"You two," he said, indicating them with his hand, "may have the honor of picking up those plates."

There was an instant of breathless astonishment. Jenkins was the first to recover, and unhesitatingly walked forward. The younger man drew back as though he had received an order from an insane man consigning him to inglorious death. The voice of the admiral put an end to the wait.

"Go ahead!" he said quietly. "Those plates may weigh tons; but if Dr. Roberts tells you to pick them up, you go and try it."

With the absolute precision of training, the officer's heels came together and his hand to his cap in quick salute. He strode to the plates, and stood opposite Jenkins, while the spectators craned forward, speculating as to what freak of madness was to be demonstrated. Jenkins, grave and unquestioning, looked across at his companion, nodded to him, and together they stooped and caught a handhold. Together they gathered their muscles as if for some prodigious exercise of strength, and simultaneously strained upward.

To the amazement of those within the room the great masses of metal came up with such ease that they were lifted breast high without perceptible effort.

(Continued)

COMMISSIONERS' PROCEEDINGS.

Ada, Okla., May 8, 1908.

The Board of County Commissioners of Pontotoc County, Oklahoma, met at the County Clerk's office, all being present, and transacted the following business:

The report of W. H. Hammond, Justice of the Peace of Frances Township, for the quarter ending March 31, 1908, was approved.

Warrant No. 8 on the supply fund for \$33.94 was cancelled.

The Farmers Independent Telephone Co. was granted the privilege to use the north and east edge of the public roads of the county where it does not conflict with other lines already in operation; the privilege was also granted to cross the roads where it is necessary.

\$1200 was transferred from the court fund to the supply fund.

The following bonds of banks that had been designated as county depositories were approved: First National Bank of Ada, First National Bank of Roff, Farmers Bank of Roff, Farmers State Bank of Ada, Bank of Francis, and the First Bank of Allen.

The claim of Haney & Phillips for \$100.00 for rent on the court house for May was allowed.

The claim of W. S. Kerr for \$2.70 for stamps and express was allowed.

The following section lines was designated as a public high way; beginning at the S. E. corner of Sec. 14 Twp. 5 N. Range 4 East thence west five miles to the west line of Pontotoc County.

J. D. RINARD, Chairman of the Board of County Commissioners.

Attest: W. S. KERR, County Clerk. STATE OF OKLAHOMA, PONTOTOC COUNTY,

Now on this 11th day of May, 1908, the Board of County Commissioners of Pontotoc County, Oklahoma met at the County Clerk's office at Ada, Okla. J. D. Rinard and C. W. Floyd being present and transacted the following business:

The vote of Stock District No. 8 was canvassed and it was found that a majority of the votes were cast in favor of all domestic animals running at large and it was ordered that hogs be allowed to run at large after June 2nd, 1908.

The following claims against the county were allowed and warrants were ordered drawn on the court fund for their payment.

J. D. RINARD, Chairman Board of County Com. Attest: W. S. KERR, County Clerk.

AMERICA MUST DOMINATE SEA.

United States Can Never Feel Safe on Pacific Coast Until Then, Says Representative Hobson.

San Francisco, Cal., May 9.—Capt. Richard P. Hobson, who is now in this city, is in favor of a powerful fleet on the Pacific Coast. In discussing the matter yesterday he said:

"The Pacific Coast demands the retention of the fleet now in this harbor. It means the protection not only of the West, but of the whole country. The United States can never feel safe on the Pacific ocean until she dominates the sea as well as the land. And domination of the sea means a fleet of such proportions that the whole race need have no fears of aggressions of the yellow race."
